Software Engineering Student, Open Source Software Enthusiast, and Builder of Tools

Education

Bachelor of Software Engineering (BSEng)

Sep 2019 — Aug 2025

University of Victoria

- Currently pursuing specializations in artificial intelligence and machine learning
- Relevant Coursework: Data Mining, Machine Learning, Pattern Recognition, Algorithms and Data Structures

Experience

Software Designer Co-op

Jan 2024 — Aug 2024

Schneider Electric

- Developed and maintained ASP.NET web tools for real-time monitoring of industrial electrical systems
- Migrated CI/CD pipelines from Azure DevOps to GitHub Actions, improving maintainability and transparency
- Built a dashboard for visualizing and managing internal deployment workflows using .NET 8.0 and Blazor
- Created a local LLM-based diagnostic tool in a company-wide hackathon to provide explanations in reports

Junior Software Engineer

May 2022 — Dec 2022

Precision MicroDynamics Inc.

- Automated lens calibration for industrial galvoscanners using an OpenCV-powered fiducial detection system
- Rewrote RPC logic using gRPC and Protocol Buffers, improving reliability of machine-server communications
- Created a JavaScript client library for real-time control of motion control systems via web UIs
- Designed and deployed a Buildbot CI/CD pipeline to streamline server software delivery using Docker

Projects

Recipeasy

Intelligent recipe assistant built with SwiftUI

- Implemented a recipe generator leveraging Swift, CoreData, and OpenAI's GPT-4o-mini

Prismatic

Daily colour puzzle game for mobile

- Developed a cross-platform puzzle game in Flutter, with native Android/iOS support

PatchCore Anomaly Detector

Unsupervised anomaly detection pipeline using PatchCore for low-data computer vision scenarios

- Integrated dimensionality reduction, feature extraction, and patch-based nearest-neighbour scoring
- Evaluated on pasta and screw datasets, achieving AUROC scores of 0.95 and 0.92 respectively

Community

UVic Engineering Competition Hosting

Jun 2023, Oct 2024

University of Victoria

- Organized programming competitions for the UVic Engineering Competition for 74 participants
- Designed the problem description for competition participants, and aided in judging

FIRST Tech Challenge Mentoring

Sept 2019 - Feb 2021

St. Michaels University School

- Mentored a high school robotics team; guided students in software development and design

Skills

Languages: Python, C++, C#, Dart, Swift, JavaScript, TypeScript, HTML, CSS

Databases: SQLite, PostgreSQL, MongoDB, Redis

AI/ML: PyTorch, TensorFlow, Scikit-Learn, OpenCV, NumPy, PyTorch, MLX

Frameworks: ASP.NET, Flask, NodeJS, Astro, React, SwiftUI, Flutter

Cloud: Azure, Oracle Cloud, Azure DevOps, GitHub Actions

Version Control: Git, Mercurial
