Software Engineering Student, Open Source Software Enthusiast, and Builder of Tools

Education

Bachelor of Software Engineering (BSEng)

Sep 2019 — Aug 2025

University of Victoria

- Currently pursuing specializations in artificial intelligence and machine learning
- Relevant Coursework: Data Mining, Machine Learning, Pattern Recognition, Algorithms and Data Structures

Experience

Software Designer Co-op

Jan 2024 — Aug 2024

Schneider Electric

- Authored, debugged, and added features to an ASP.NET web application for monitoring electrical equipment and power solutions in industrial settings
- Improved developer experience by converting CI/CD workflows from Azure DevOps to GitHub Actions
- Built a web-based dashboard for the management of the team's CI/CD pipelines using .NET 8.0 and Blazor
- Competed in a company-wide hackathon, in which I created a locally run machine learning tool to assist in the identification and resolution of electrical health issues

Junior Software Engineer

Sep 2022 — Dec 2022

Precision MicroDynamics Inc.

- Researched, designing, and developing an OpenCV-based fiducial detection program for the automated measurement of distortion and calculation of calibration files for F-theta lenses on an industrial galvoscanner CNC platform
- Improved remote procedure calling reliability by rewriting legacy RPC methods to utilize gRPC and Protocol Buffers for communication between machine operator software and the server software
- Modernized third party connectivity options through creating a JavaScript library for the communication between the server software and client web-based user interfaces
- Designed and implemented a CI/CD pipeline for server software using Buildbot and Docker

Projects

Recipeasy

- An open-source recipe management and generation app written in Swift using SwiftUI
- Uses a CoreData database to store user recipes and ingredients, and OpenAI's gpt-4o-mini model with an optimized system prompt to generate new recipes

Prismatic

- A mobile, open source, daily colour puzzle game developed in Dart
- Written using the Flutter framework along with native iOS and Android code to support multiple platforms

Community

UVic Engineering Competition

Jun 2023, Oct 2024

University of Victoria

- Organized hosted the programming competitions for the UVic Engineering Competition for 74 participants
- Designed the problem description for competition participants, and aided in the judging process

Skills

Languages: Python, C++, C#, Dart, Swift, JavaScript, TypeScript, HTML, CSS

Frameworks: Flutter, React, NextJS, Unity, Unreal Engine, WPF, Blazor, .NET

Tooling: Git, Bash, Docker, Linux, OpenCV, gRPC, Azure DevOps, GitHub Actions, PyTorch, MLX
